

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1 **Claim 1 (currently amended):** A portable radio device
2 comprising:
3 a first casing including a front surface and a rear
4 surface;
5 a second casing including a front surface and a rear
6 surface;
7 a hinge portion to connect together the first and
8 second casings respectively roatatably;
9 a convex portion provided on the ~~inside~~ front surface
10 of the first casing and protruded from the front surface of
11 the first casing inside; and
12 a concave portion provided on the ~~inside~~ front surface
13 of the second casing,
14 wherein the convex portion is fitted in ~~and~~ the
15 concave portion ~~are fitted~~ when the first and second
16 casings are folded.

1 **Claim 2 (original):** The portable radio device
2 according to claim 1, wherein a telephone transmitter unit
3 to detect sounds is accommodated in a space in the first
4 casing formed by the convex portion.

1 **Claim 3 (original):** The portable radio device
2 according to claim 2, wherein a receiver unit to emit
3 sounds is accommodated in a position of the concave
4 portion.

1 **Claim 4 (original):** A portable radio device
2 comprising:
3 a first casing in which a primary circuit board is
4 accommodated;
5 a second casing; and
6 a hinge portion to connect together the first and
7 second casings respectively roatably;
8 wherein, when the device is placed on the plane in the
9 condition in which the second casing is opened from the
10 first casing, a bottom surface of the first casing and a
11 contact portion of the second casing are brought into
12 contact with the plane.

1 **Claim 5 (original):** The portable radio device
2 according to claim 4, wherein the contact portion is
3 provided on the second casing near the hinge portion.

1 **Claim 6 (original):** The portable radio device
2 according to claim 4, wherein the contact portion is formed

3 into a convex portion.

1 **Claim 7 (original):** The portable radio device
2 according to claim 6, wherein the convex portion is formed
3 on a center line in the longitudinal direction of the
4 second casing.

1 **Claim 8 (original):** The portable radio device
2 according to claim 6, wherein the convex portion is formed
3 on a line at a right angle with the center line of the
4 second casing.

1 **Claim 9 (original):** A portable radio device
2 comprising:
3 a first casing in which a primary circuit board is
4 accommodated;
5 a second casing; and
6 a hinge portion to connect together the first and
7 second casings respectively roatatably;
8 wherein, when the device is placed on the plane in the
9 condition in which the second casing is opened from the
10 first casing, a lower side portion of bottom surface of the
11 first casing and a contact portion of the second casing are
12 brought into contact with the plane.

1 **Claim 10 (original):** The portable radio device
2 according to claim 9, wherein the contact portion is
3 provided on the second casing near the hinge portion.

1 **Claim 11 (original):** The portable radio device
2 according to claim 9, wherein the contact portion is formed
3 into a convex portion.

1 **Claim 12 (original):** The portable radio device
2 according to claim 11, wherein the convex portion is formed
3 on a center line in the longitudinal direction of the
4 second casing.

1 **Claim 13 (original):** The portable radio device
2 according to claim 11, wherein the convex portion is formed
3 on a line at a right angle with the center line of the
4 second casing.

1 **Claim 14 (original):** A portable radio device
2 comprising:
3 a first casing in which an antenna and a primary
4 circuit board are accommodated;
5 a second casing;
6 a hinge portion to connect together the first and
7 second casings respectively roatatably; and

8 a first concave portion for putting a finger formed on
9 an antenna accommodation portion to accommodate the antenna
10 of the first casing.

1 **Claim 15 (original):** The portable radio device
2 according to claim 14, wherein the curvature of concave
3 portion is the curvature of the cross sectional shape of
4 the finger and over.

1 **Claim 16 (original):** The portable radio device
2 according to claim 14, further comprising a second concave
3 portion formed on a portion of the opposite side of the
4 first casing of the antenna accommodation portion.

1 **Claim 17 (original):** A portable radio device
2 comprising:
3 a first casing in which an antenna and a primary
4 circuit board are accommodated;
5 a second casing;
6 a hinge portion to connect together the first and
7 second casings respectively roatatably;
8 an antenna accommodation portion to accommodate the
9 antenna provided along one side surface of the first
10 casing; and

11 a battery pack accommodation unit provided between the
12 other side surface of the first casing and the antenna
13 accommodation portion.

1 **Claim 18 (original):** The portable radio device
2 according to claim 17, further comprising a rib provided
3 along the antenna accommodation portion in the battery pack
4 accommodation unit.

Claims 19 and 20 (canceled)

1 **Claim 21 (original):** A portable radio device
2 comprising:
3 an antenna provided on a side of a casing;
4 an antenna accommodation portion to accommodate the
5 antenna;
6 a circuit board provided in a casing;
7 a support plate for supporting the circuit board; and
8 an auxiliary support plate mounted in the casing so
9 that the support plate is extended to the vicinity of the
10 antenna accommodation portion, the auxiliary support plate
11 partitions a space in which the antenna is accommodated,
12 together with a side portion of the inner surface of the
13 casing, and the circuit board and the antenna are shielded.

1 **Claim 22 (original):** The portable radio device
2 according to claim 21, wherein the metallic evaporation is
3 conducted on at least one of the support plate and the
4 auxiliary support plate.

1 **Claim 23 (original):** A folding portable radio device
2 comprising:
3 a first casing;
4 a second casing;
5 a hinge portion to connect together the first and
6 second casings respectively roatatably;
7 an antenna accommodation portion provided in a side of
8 the first casing to accommodate an antenna;
9 a circuit board provided in the first casing;
10 a support plate for supporting the circuit board; and
11 an auxiliary support plate mounted in the first casing
12 so that the support plate is extended to the vicinity of
13 the antenna accommodation portion, the auxiliary support
14 plate partitions a space in which the antenna is
15 accommodated, together with a side portion of the inner
16 surface of the first casing, and the circuit board and the
17 antenna are shielded.

1 **Claim 24 (original):** The portable radio device
2 according to claim 23, wherein the metallic evaporation is
3 conducted on at least one of the support plate and the
4 auxiliary support plate.
